

Area Analysis

Introduction

The Area Analysis is developed to provide The Innova Group and Work Group an overview of the Area, as well as to communicate the team's findings and highlight specific issues based on questionnaire documentation, population distribution review and workload analysis. Overall it takes each of us out of our local environment and places us in a position to see beyond our Service Area and Service Unit needs. The Area Analysis is organized into the following five areas.

- Population Profile Summary
- Survey Summary
- Underserved Populations and Recommended Service Area
- Recommended Regional Areas
- Migration Summary

Population Profile Summary

User Population Analysis

The table on the following page ranks the proposed Primary Service Areas within the Billings Area by User Population growth quantity.

- For Contract Health Service Delivery Areas (CHSDA) Counties, the projected population is based on an IHS HQ interpretation of growth based on County data from US Census data and analysis of Native American birth and death certificates. The growth rates are re-published annually by IHS HQ.
- For Service Areas not within CHSDAs, the growth rates for county population is based strictly on US Census projections by County for Montana.
- Growth rate varies by Service Area. Rocky Boy, the fastest growing Service Area is forecasted to grow by 32.97%, while Butte's User Population is anticipated to decline by 2.9 % over the 2001 to 2012 time frame.
- The User Population Growth is simply the projected 2012 population minus the 2001 population. Dividing this column by 1000 will provide a simple rule of thumb solution to additional medical provider (Doctor, physician assistant, Nurse Practitioner or Midwife).
- Rocky Boy, Lame Deer, Southern Flathead, Browning are all anticipated to grow by 1000 users over the 2001-2012 time span.
- The Non-Service Unit row compiles those communities remotely located from all points of service, through out the two state Area.
- Plentywood is a new Service Area for consideration and is located in the North East Section of the Fort Peck Service Unit. Its communities are typically more than an hour from their available point of care.

The maps on the following page show the distribution of User Population by County and by Zip Code relative to facility locations and driving time perimeters. Red circles represent 30 mile primary care access perimeters and blue circles represent 60 mile hospital/ER access perimeters.

- The User Population by County and by Zip indicates that Great Falls of Cascade County, MT; has the most significant User Population outside the 30 mile perimeter.
- To a lesser degree, Glasgow and Valley County, MT; Kalispell and its surrounds, Lewis and Clark County, MT ; Phillips County, MT; Sanders County, MT; and Sheridan and Natrona County, WY
- The Flathead, Fort Peck, and Wind River Service Units as well as the Great Falls Area are areas of significant population that do not have direct care inpatient care within the 60 mile access perimeter.

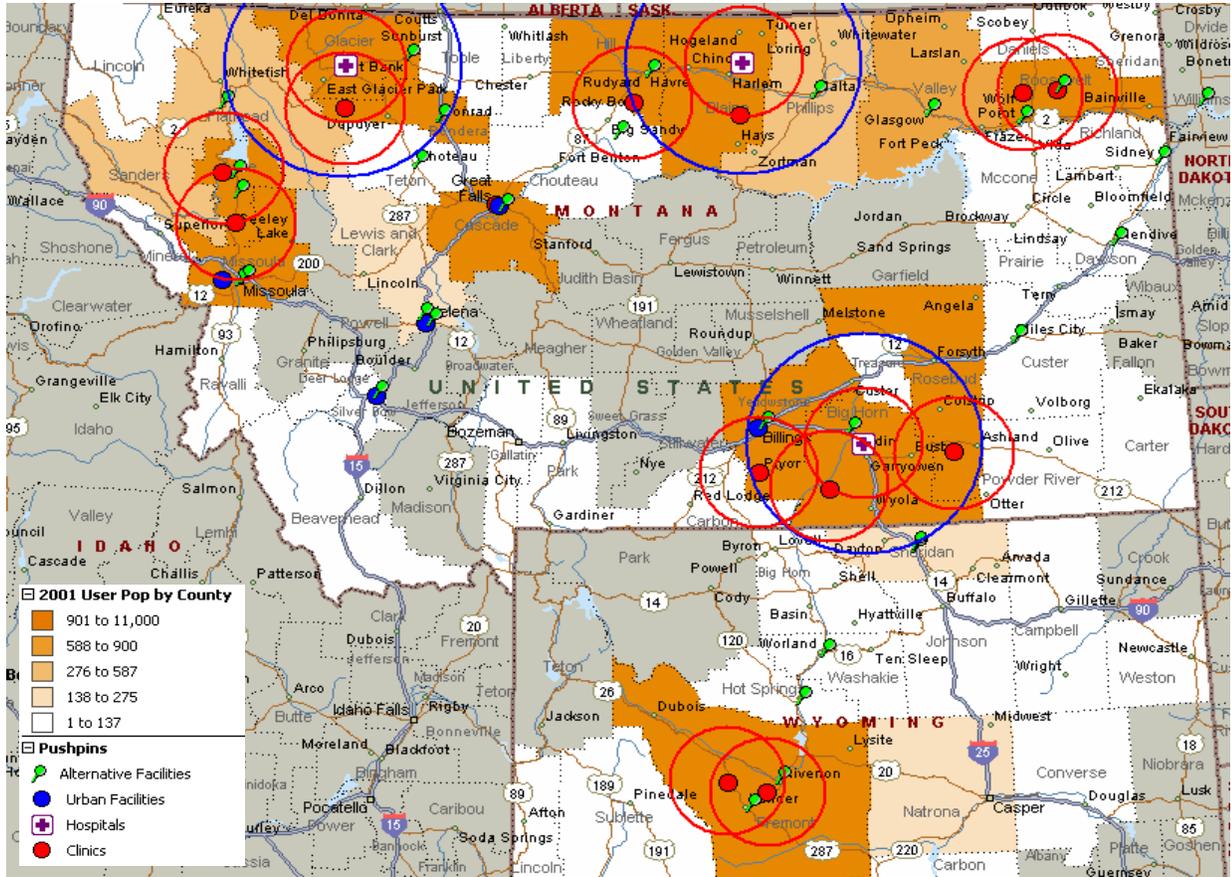

User Population Growth by Rank by PSA

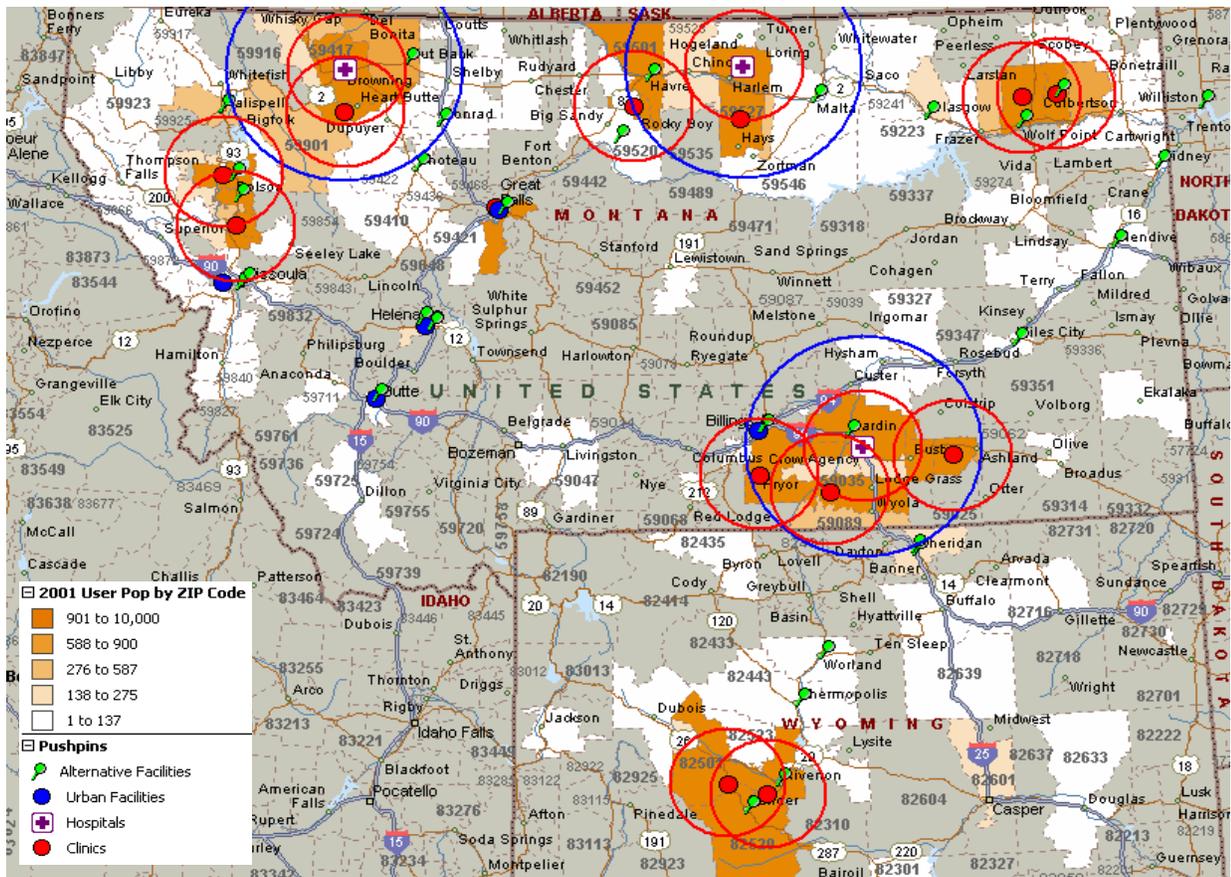

Service Area	Service Areas with Hospital, Health Center, or Urban Program	2001 User Pop	2012 User Pop	User Pop Growth %	User Pop Growth	Growth Rank
Rocky Boy	HC	4,337	5,767	32.97%	1,430	1
Lame Deer	HC	6,400	7,477	16.84%	1,077	2

2001 User Population by County

2001 User Population by Zip Code

Service Population Analysis

The table on the following page outlines the User Population and Service Population by County throughout the Billings Area for the years 2001 and 2012. The goal of this table is to identify underserved populations that could be considered when selecting needed additional Primary Care Service Areas.

- The User Population is the number of actual unique users of the IHS/tribal healthcare system in the past three years by County.
- The following counties have greater than 138 Users of the IHS system and do not have an IHS or tribal primary care assets within the county.

Yellowstone, MT*	Sheridan, WY	Valley, MT
Cascade, MT*	Natrona, WY	Sanders, MT
Missoula, MT	Flathead, MT	
Lewis Clark, WY	Phillips, MT	

*Limited Urban Program Primary Care Assets

- The Service Population is the number of Native American people. These numbers are based on an IHS HQ interpretation of growth interpreted from US Census County data and analysis of Native American birth and death certificates. The growth rates are re-published annually by IHS HQ. IHS publishes the white cell numbers in these columns.
- The shaded cells in these Service Population columns indicate 2000 census populations of Native Americans pulled directly from the US Census bureau by The Innova Group. These numbers are projected to 2001 and 2012 consistent with the US Census projection for a County.
- The User Pop to Service Pop column indicates the percentage of Native Americans from a county who are using the IHS/tribal health care system. The Counties in yellow reflect locations where the User Population is less than 60% of the Service Population.
- If the historical rate of utilization by Native Americans use of the IHS/tribal system remains the same, the Un-served Service Population column indicates the quantity of Native Americans likely not to be served by the system in a specific county in the year 2012. Counties with greater than 300 potential additional Users are as follows:

Yellowstone, MT	Cache, Utah	Campbell, WY
Cascade, MT	Flathead, MT	Ravalli, MT
Weber, UT	Gallatin, MT	Sweetwater, WY
Missoula, MT	Silver Bow, MT	
Lewis-Clark, MT	Natrona, WY	

The map on the following page, in addition to providing travel distances between significant locations in the Area, also indicates the Counties with the largest growth anticipated between 2001-2012.

- Yellowstone County is the only County anticipating greater than 1000 Service population growth that does not have primary care assets.

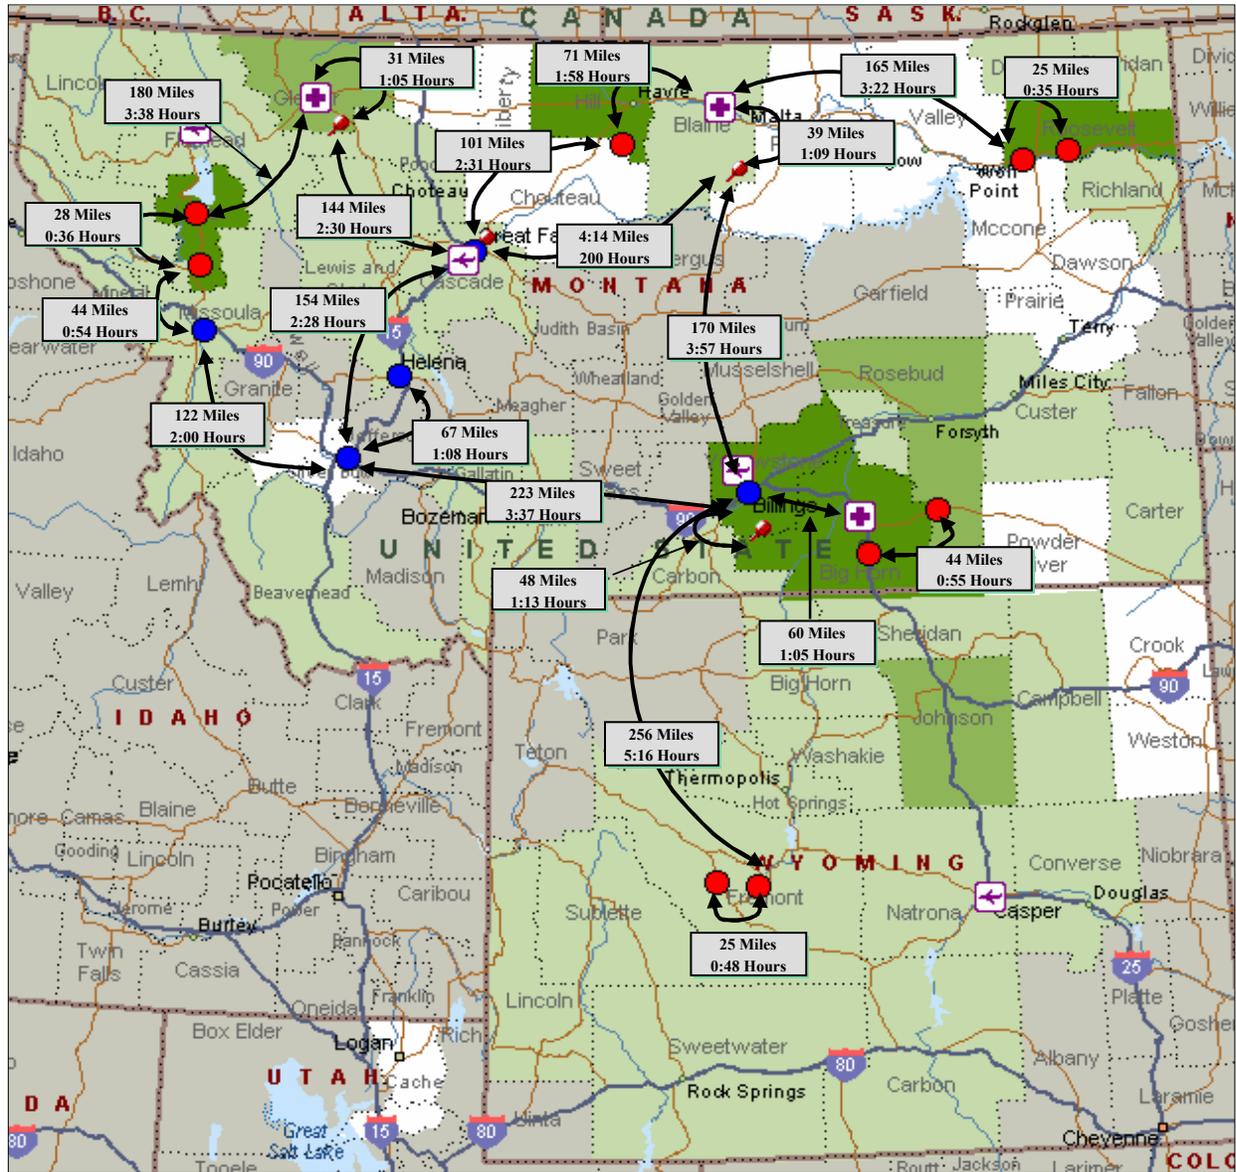

State	County	Total 2001 User Pop	2001 Service Pop	2012 Service Pop	Service Pop Growth	Service Pop Growth Rate	User Pop to Service Pop	2012 Proj. User Pop	Unservd Service Pop

Gray cells contain service population created by correlating 2000 state census data projections with the present ratio of Natives to county population. White cells contain user and service population numbers from the HSP. Yellow cells identify a 1997 user to service population ratio less than 80%.

Service Population Growth 2001-2012 by County

Service Pop Growth by County

Payor Profile Summary

At the kick-off meeting in October, one of the Characteristics suggested as a priority determinant was a Service Area's socio-economic barriers to care. This can be measured in many ways, but identifying the Payor Profile mix of the population and determining whether the population is CHS eligible are two means to measure the reliance the population has on the IHS/Tribal Health Care System.

The table on the following page profiles the population's ability to be reimbursed for care based on the FY 1999-2001 provider visits by each Primary Service Area's communities of residence. It also identifies the percentage of provider visits from a PSA that are not CHS eligible. Populations with a high number of Non-CHS eligible visits are likely to put a greater demand on the IHS/tribal health care system.

- The percentage of primary care visits by payor type is indicated adjacent to the number of visits for that payor.
- The Other Third Party column indicates the number and percentage of visits that have source of payment beyond or different than Medicaid or Medicare. For instance this would include personal or employment offered private insurance coverage.
- The Total Third Party column represents a sum of all third party eligibility, Medicare + Medicaid + Other Third Party + Vets.
- The Uninsured column indicates the number and percentage of visits provided for which there was no payment source identified. The five pink cells indicate those Service Areas with the greatest percentage of unpaid visits.
- The Non-CHS Eligible column indicates the percentage of the population that are served at the facility that are not eligible for Contract Health Coverage if specialty care is required. The blue represents those with the smallest percentage, while the pink indicates the greatest percentage. While the percentage is telling, the number is also extremely important when you see the number of visits with Non-CHS eligibility at Crow and Browning.

The work group may state that one criteria for future resource allocation priority might be the percentage of uninsured population in a Service Area. Unfortunately this might lead an organization to not enroll its population in available insurance programs. Other Areas just might not be as competent enrolling members in appropriate programs. We will need to discuss these realities as we consider criteria in future meetings to determine whether this is or is not an appropriate criteria to determine future resource allocation.

Survey Summary

The following pages bring together all the questionnaire responses having to do with regionalization (questions 9-13) and the Service Distribution Template (question #18).

Question #18 – Please indicate where the threshold is for accessibility to quality care for the following list of services.

The tables on the following pages indicate the tally of desires from the health center or hospital respondents, for the distribution of product lines into the three levels of care requested in the survey. The facilities typically responded from their own facility’s perspective, thus hospitals typically responded as if their own Primary Service Area was a Regional Center. The table below is a synthesis of those responses and will guide us as we consider services for each Area.

All Services will be considered based on the population supported. Justification of the yellow highlighted services will be difficult at the access threshold defined. The template below is a guideline of desire.

	Primary Service Area	Within 30 minutes	Within 60 minutes
Physician Care	Family Practice Internal Medicine Pediatric Obstetrics Gynecology Psychiatry Nephrology Dental Rheumatology Traditional Healing Oral Surgery	General Surgery Cardiology	Orthopedics Ophthalmology Dermatology ENT Urology Neurology Allergy Pulmonary Gerontology Gastroenterology Oncology Other Surgical Subspecialties Other Medicine Subspecialties Pediatric Subspecialties

9. Are there communities or geographic groups of communities that are specifically underserved relative to access to primary care? If so, please list the communities grouped by geography.

Arapahoe	Arapahoe Ranch (Thermopolis area, on reservation) – 20-30 <i>uniques (perhaps up to 60 in summer, 75 miles away.</i> Crowheart area – 150-200 <i>uniques, all ranching community so spread out.</i>										
Billings	<i>They are supposed to serve Billings. There are communities (Laurel, Columbus, etc.) with Natives they will serve if they can get to town, but they can't transport them and they are outside of Billing's SOW.</i>										
Blackfoot	Babbs & Seville										
Butte Urban											
Crow	Yes. They are Wyola, St. Xavier and Ft. Smith. (Tribal Health) Pryor – isolated with no local ambulance service. Wyola – isolated with no local ambulance service (30 miles south) . Ft. Smith – isolated with no local ambulance service (45-50 miles southwest) .										
Ft. Belknap	<ol style="list-style-type: none"> Lodge Pole Community – No Clinic, Hospital, Ambulance Services or local direct care. Hays Community - No 24-hour ER Services. Dodson Community – No Clinic, Hospital, Ambulance Services or local direct care. Agency Community – No Specialty Clinics, blood bank, access to immediate surgery, OB services, airstrip landing services. Beaver Creek/Zortman Communities – No Clinic, Hospital, Ambulance Services or local direct care. 										
Ft. Washakie	Arapahoe Ranch (Thermopolis area, on reservation) – 20-30 <i>uniques (perhaps up to 60 in summer, 75 miles away.</i> Crowheart area – 150-200 <i>uniques, all ranching community so spread out. We face "mountain passes" for any way we go to get out of this area. About 45 miles away.</i>										
Great Falls Urban											
Hays	<ol style="list-style-type: none"> Lodge Pole Community – No Clinic, Hospital, Ambulance Services or local direct care. Hays Community - No 24-hour ER Services. Dodson Community – No Clinic, Hospital, Ambulance Services or local direct care. Agency Community – No Specialty Clinics, blood bank, access to immediate surgery, OB services, airstrip landing services. Beaver Creek/Zortman Communities – No Clinic, Hospital, Ambulance Services or local direct care. 										
Heart Butte	Babb, St. Mary										
Helena Urban											
Lame Deer	Kirby is the most likely area. (N. Cheyenne Board of Health) Ashland, Busby, Birney, Muddy (CHRs) Birney, Busby, Ashland & outlined areas.										
Lodge Grass	<p>There are outlying communities and geographic groups of communities that are specifically underserved relative to access to primary care. These communities have generally been described in Item 2 & 9 above. Barriers to serving the primary care needs include rural isolation from Lodge Grass, poor road conditions, limited food, lack of dependable & timely ambulance service, limited interpreters such as Spanish, German dialect for the Hutterite Colony outside of Lodge Grass, which does have access to the Emergency Room facilities in Lodge Grass as well as the non-Indian community. Examples of isolation of rural & groups of rural communities include approximately:</p> <table border="1"> <thead> <tr> <th>Community</th> <th>IHS Service Population</th> </tr> </thead> <tbody> <tr> <td>Lodge Grass</td> <td>1848</td> </tr> <tr> <td>St. Xavier</td> <td>178</td> </tr> <tr> <td>Wyola</td> <td>379</td> </tr> <tr> <td>Fort Smith</td> <td>115</td> </tr> </tbody> </table> <p>The service population data can be reflected to the fact that the average monthly clinical service for the Lodge Grass Health Center ranges from 299 to 380 patients per month over a 10-month period. <i>They used tribal numbers above to justify Head Start.</i></p>	Community	IHS Service Population	Lodge Grass	1848	St. Xavier	178	Wyola	379	Fort Smith	115
Community	IHS Service Population										
Lodge Grass	1848										
St. Xavier	178										
Wyola	379										
Fort Smith	115										
Missoula Urban	Missoula Pre-Release Clients, Native men and women.(underserved) Lack of IHS services, Residential Chemical Dependency Services(inpatient tx) for native adults and or adolescents.										
Poplar	Basically all of our service area is considered remote, isolated and underserved.										
Pryor	Pryor residents aren't offered Psychiatry, Derm, Ortho, Cardiology, Rheumatology, and Physical therapy, occupational therapy. Pryor doesn't have a grocery store or any means in town to buy milk, fresh fruit and vegetables, bread, etc. in the grocery line. No competitive gas station (one, with prices sky high) it is 40 miles to the nearest gas station and grocery store.										
Wolf Point	Basically all of our service area is considered remote, isolated and underserved.										

	10. Considering your neighboring tribes and service units, where is the natural location for a regional center that would allow for increased and better quality services to be provided to the area? Who would be the participating tribes and Service Units?	11. Of your present services you offer locally, which services would qualitatively benefit by being located in a regional center?	12. Which of the services you presently refer to a distant referral center do you believe could be adequately provided in a regional center, or at your facility?
Arapahoe	<p>The natural location for a regional center would be Ethete, Wyoming, which is located midway between Arapahoe and Fort Washakie. Participating tribes/service unit would be:</p> <ul style="list-style-type: none"> · Eastern Shoshone tribe · Northern Arapahoe tribe · Wind River Service Unit 	<p>The benefits of having all our services under one roof, i.e. we could combine staff and see more patients using extended hours. Programs would be more cohesive and would feel much more like a team. Financial benefits would be gained from having only one facility to maintain.</p>	<ul style="list-style-type: none"> · Physical Therapy · Occupational therapy · Cardiovascular rehabilitation · 8-bed psychiatric care center · Addiction specialist · Dental department providing conscious IV sedation for children · Increased dental services · Orthopedics (have a lot of deferred)
Billings	<p>Crow Agency</p>		<p>Xray, dental, mammograms, pre-natal, adolescent SA tox Center, halfway house for adults (30+) and youth (15+).</p>
Blackfoot		<p>Hot overreaching today – Risk Management is what this is about.</p>	<ul style="list-style-type: none"> · Orthopedics · ENT · Ophthalmologist
Butte Urban	<ul style="list-style-type: none"> · Four urban programs are clustered with Butte and Helena in the center and Missoula and Great Falls on the periphery. 		
Crow	<p>I think the most natural setting for a regional center would be at the Crow Service Unit in Crow Agency MT. There are two major highways intersecting Crow, I-90 and Hwy 212, as well as a local airport in Hardin MT 14 miles north. The Crow service unit is relatively new, completed in 1995. There is room for expansion; also in the immediate (sic) is a 40 bed nursing home, as well as a state certified Dialysis center. The local tribes in the immediate area are the Crow and the Northern Cheyenne.</p> <p>(Tribal Health) The Northern Cheyenne Reservation is east and adjacent to the Crow reservation. Other tribes have benefited from the services at the Crow/Northern Cheyenne Hospital. Patients from Ft. Belknap, Ft. Peck and Ft. Washakie receive surgical and specialty services from the Crow/Northern Cheyenne Hospital.</p>	<p>A regional youth treatment center Regional detox center</p>	<p>Substance abuse treatment center (inpatient)</p>
Ft. Belknap	<p>Fort Belknap Indian Reservation is centrally located on U.S. Highway #2</p> <ol style="list-style-type: none"> 1. Fort Belknap – Assiniboine & Gros Ventre Tribes. 2. Fort Peck – Assiniboine & Sioux Tribes. 3. Rocky Boy – Chippewa & Cree Tribes. 4. Browning – Blackfeet Tribe. 5. Urban Centers in Northern Montana 6. Little Shell 7. Descendents 	<ul style="list-style-type: none"> · Using allied health programs from the Fort Belknap College, medical programs can be expanded to Registered Nurses programs for recruitment for specialty clinics to benefit the communities. · Convalescence care such as swing bed care, care after surgery, wound care, etc. · Assisted living care for the elderly. · Full time ALS service. 	<ul style="list-style-type: none"> · OB Services. · Pre-Natal Services. · Cardiac Services. · All Surgeries. · Complete Radiology Services. · Dental – Orthodontic Services. · Ophthalmology Services.
Ft. Washakie	<p>The natural location for a regional center would be Ethete, Wyoming, which is located midway between Arapahoe and Fort Washakie. Participating tribes/service unit would be:</p> <ul style="list-style-type: none"> · Eastern Shoshone tribe · Northern Arapahoe tribe · Wind River Service Unit 	<p>The benefits of having all our services under one roof, i.e. we could combine staff and see more patients using extended hours. Programs would be more cohesive and would feel much more like a team. Financial benefits would be gained from having only one facility to maintain.</p>	<ul style="list-style-type: none"> · Physical Therapy · Occupational therapy · Cardiovascular rehabilitation · 8-bed psychiatric care center · Addiction specialist · Dental department providing conscious IV sedation for children · Increased dental services

	10. Considering your neighboring tribes and service units, where is the natural location for a regional center that would allow for increased and better quality services to be provided to the area? Who would be the participating tribes and Service Units?	11. Of your present services you offer locally, which services would qualitatively benefit by being located in a regional center?	12. Which of the services you presently refer to a distant referral center do you believe could be adequately provided in a regional center, or at your facility?
Great Falls Urban		<ul style="list-style-type: none"> · Combined coalition of Indian Urban Health. FQHC in process. Health Center \$ could be matching dollars (330). Phase 1 –start up, phase 2, expansion. 	
Hays	<p>Fort Belknap Indian Reservation is centrally located on U.S. Highway #2</p> <ol style="list-style-type: none"> 1. Fort Belknap – Assiniboine & Gros Ventre Tribes. 2. Fort Peck – Assiniboine & Sioux Tribes. 3. Rocky Boy – Chippewa & Cree Tribes. 4. Browning – Blackfeet Tribe. 5. Urban Centers in Northern Montana 6. Little Shell 7. Descendents 	<ul style="list-style-type: none"> · Using allied health programs from the Fort Belknap College, medical programs can be expanded to Registered Nurses programs for recruitment for specialty clinics to benefit the communities. · Convalescence care such as swing bed care, care after surgery, wound care, etc. · Assisted living care for the elderly. · Full time ALS service. 	<ul style="list-style-type: none"> · OB Services. · Pre-Natal Services. · Cardiac Services. · All Surgeries. · Complete Radiology Services. · Dental – Orthodontic Services. · Ophthalmology Services.
Heart Butte	<p>Great Falls (2 hours from Heart Butte and 2 hours from Browning)</p> <p>Blackfeet, Ft. Belknap, and Rocky Boy</p>	All – Basic Family Care	<ul style="list-style-type: none"> · Heart · Surgery · GI procedures · Labs - clinical · Ortho
Helena Urban			<ul style="list-style-type: none"> · Pharmacy, Neuro-metric testing, Medical De-Tox, Acute Mental Health, Radiology, Half-Way hose, Transitional Living, Referral Specialty Care, Laser Therapy, Ophthalmology, Optometry, Dental Care
Lame Deer	<p>Crow Agency Hospital Crow Tribe and Northern Cheyenne Tribe</p> <p>(CHRs): Crow Cheyenne Health Services Unit, where we are already using for services.</p>	<p>ER Services</p> <p><i>* presently staffing & qualification in this service are being tested daily.</i></p> <p>(CHRs) Lame Deer Community Health is centralized for each of our districts. (Media) It would be great to have local Diabetes services (Dialysis Center) and local residential treatment center for alcohol and drug problems.</p>	<p>Specialized x-ray studies and cardiac testing, would be nice to have at CAH (Crow Agency Hospital) rather than sending to Billings.</p> <p><i>X-Ray services – Flouroscopy, Barium Enema</i></p> <p><i>Cardiac – Stress testing</i></p> <p>(CHRs) Need of a mammography machine. More extensive lab work, so they won't have to be sent to Crow or Billings (especially X-Ray: after hours or ER service you usually have to wait a day or go to Crow). More specialists to come once a month.</p>
Lodge Grass	<p>The natural location for the regional center, which would allow for increased and better quality services would be Billings, which is approximately 85 miles from Lodge Grass. Local housing and lodging care is a problem for patients, in Billings, who are from the rural isolated communities on the Crow Indian Reservation.</p> <p>The participating tribes and Service Units would include the Crow Tribe, the Northern Cheyenne Tribe, the Shoshone & Arapahoe Tribes in Wyoming and their corresponding Service Units.</p> <p><i>Split decision with Crow. Crow would need significant "buffing up". That would be defined as additional services indicated below in question 11.</i></p>	<p>Several services offered locally would qualitatively benefit by being located in a regional center. These are identified herein but the point must be made that the additional location in the regional center would not lessen the need for local service in the community. The additional services which would be located in the regional center would include: improved dialysis center, cardiology, CT scan, MRI, cancer treatment, high risk obstetric care, trauma care.</p>	See #11

	10. Considering your neighboring tribes and service units, where is the natural location for a regional center that would allow for increased and better quality services to be provided to the area? Who would be the participating tribes and Service Units?	11. Of your present services you offer locally, which services would qualitatively benefit by being located in a regional center?	12. Which of the services you presently refer to a distant referral center do you believe could be adequately provided in a regional center, or at your facility?
Missoula Urban	<ul style="list-style-type: none"> Regional Center in Missoula. Salish & Kootenai. The tribe usually provides contract care for their enrolled members from providers in Missoula. 	<ul style="list-style-type: none"> Would like Missoula to be a regional center. Missoula would be a perfect as a regional center due to the geographical location of tribes in Montana. 	
Poplar	<p>There is no natural location for a regional center. However, consideration might be given to cooperative efforts with the North Dakota tribes and service units.</p> <p><i>They have better access to the Aberdeen Area (Dakotas) for synergy than the Billings Area (Sioux and Assiniboine are intermingled... Poplar more Sioux, Wolf Point more Assiniboine.)</i></p>	<ul style="list-style-type: none"> It would benefit us to have cardiac consultants back on our campus. 	<p>If a surgeon was available locally, we would be able to keep more locally instead of referring to Billings or Great Falls our major referral centers. Williston and Glasgow do get some of our less intense cases.</p>
Pryor	<p>Billings, MT</p> <p>Participating tribes: Crow, Northern Cheyenne, Arapaho, Sioux</p>	<ul style="list-style-type: none"> Substance Abuse Mental Health Prenatal Care with ultrasound, full time lab and nutritionist Cardiology Dialysis Neurology Cancer treatment 	<ul style="list-style-type: none"> Cardiology Ortho if x-ray was present Rheumatology if lab updated. Dental relief and dental surgery Dialysis
Wolf Point	<p>There is no natural location for a regional center. However, consideration might be given to cooperative efforts with the North Dakota tribes and service units.</p> <p><i>They have some patients from Ft. Belknap that come over for ultrasounds and endocrinology. But regionalization would be difficult.</i></p>	<ul style="list-style-type: none"> It would benefit us to have cardiac consultants back on our campus. 	<p>If a surgeon was available locally, we would be able to keep more locally instead of referring to Billings or Great Falls our major referral centers. Williston and Glasgow do get some of our less intense cases.</p>

13. Please describe your local EMS and 911 services.	
Arapahoe	911 Service is available through the Fremont County EMS. Ambulance call to our clinics are responded to by the Riverton EMS for Arapahoe Health Center and by the Lander EMS for Fort Washakie Health Center. The local first responders are volunteers in the Fort Washakie area. There are no first responders in any of the Arapahoe area.
Billings	All local from Billings.
Blackfoot	<ul style="list-style-type: none"> · 911 Service is managing dispatching · EMS centralized at Browning · 1 Crew on at a time (BLS) – No radio Pre-hospital program Inter Hospital Program (call crew)
Butte Urban	
Crow	Local EMS service is provided by contract with Big Horn County. 911 service is primarily provided by Big Horn County, some from BIA LES.
Ft. Belknap	<ol style="list-style-type: none"> 1. Non-enhanced 911 services to Blaine County Sheriffs Office. 2. EMS dispatched out by E.R. by staff nurses. 3. Licensed Volunteer BLS (basic life support) Services. 4. Unlicensed Volunteer services at Hays.
Ft. Washakie	911 Service is available through the Fremont County EMS. Ambulance call to our clinics are responded to by the Riverton EMS for Arapahoe Health Center and by the Lander EMS for Fort Washakie Health Center. The local first responders are volunteers in the Fort Washakie area. There are no first responders in any of the other reservation communities.
Great Falls Urban	
Hays	<ol style="list-style-type: none"> 1. Non-enhanced 911 services to Blaine County Sheriffs Office. 2. EMS dispatched out by E.R. by staff nurses. 3. Licensed Volunteer BLS (basic life support) Services. 4. Unlicensed Volunteer services at Hays.
Heart Butte	Non-existent and non-responsive unless your lucky day. One might respond after “5” golden minutes. Blackfeet Community hospital EMS might respond
Helena Urban	
Lame Deer	Our local EMS has 4 paramedics, 2 intermediates, and over a dozen EMTs. Paramedics are on an “as available” service and are limited by Montana Law (Problems when leaving the Indian Nation) as to what they can do compared to national protocols. The 911 calls are handled by the local BIA police and medical calls are relayed to the EMS dispatcher. Not necessarily the caller but the message itself. <i>(Ernestine’s Description from Adl. Svs.) Advanced life support service with 3 ALS equipped ambulances, 3 full time paramedics, 1 sub paramedic, 1 EMT intermediate, 10 EMT basics, 1 FRA, 4 emergency medical dispatchers, 1 Rescue/extrication truck, 2 trained techs. 911 system is housed at BIA LES.</i> All located within the Lame Deer community.
Lodge Grass	EMS personnel are stationed at Lodge Grass from 4:30 pm to 7:30 am. There are no immediate EMS personnel in Lodge Grass from 7:30 am to 4:30 pm. When EMS is dispatched to Lodge Grass for an emergency they either arrive from Hardin that is approximately 35 miles or Crow Agency that is approximately 20 miles from Lodge Grass. 911 services are available through Big Horn County Dispatch.
Missoula Urban	
Poplar	EMS is provided by local volunteers, trained and supervised by local hospital. IHS helps with ambulances, equipment, etc. Strong need for more trained volunteers. Then could train present to higher level. <i>Often personnel arrive with lack of training or equipment (ie: a lifepack). Poplar EMS is poor. Need a uniform way of delivering EMS services. Tribe and IHS need to play a joint role in the delivery of EMS. This issue is a significant one for this remote area.</i> 911 is a cooperative effort between Ft. Peck Tribes and Roosevelt County. Good cooperative relationship between law and order agencies. Cross-deputization. <i>Seen as a leader in this. The 911 service is good.</i>
Pryor	We call 911 that activates the Billings, MT services. It takes at least 1 hour for ambulance response at the minimum. The same for the police. If we use Help, flight time is 15 minutes.
Wolf Point	EMS is provided by local volunteers, trained and supervised by local hospital. IHS helps with ambulances, equipment, etc. Strong need for more trained volunteers. Then could train present to higher level. 911 is a cooperative effort between Ft. Peck Tribes and Roosevelt County. Good cooperative relationship between law and order agencies. Cross-deputization.

Recommended Primary Service Areas

The current Billings Area consists of 15 Primary Care Service Areas and 5 Urban program (2 of which offer limited Primary Care). As part of this study we were asked to identify a Service Area for the Little Shell tribe as well as potentially other new Service Areas. In order to define new service areas, the work Group provided a number of clues in their stated priority determinants at the Kick off meeting. Those applicable to this discussion are:

- Lack of access to Core Health Services
- Areas with population growth
- Areas with the least resources
- Areas where you can make the greatest impact
- Service Areas with High needs and low access

Generally this translates to a criteria for new service areas as “underserved areas with a significant population”. The table on the opposite page looks at this general goal through 6 specific criteria filters in order to find places consistently identified as underserved.

The first column identifies those counties from the Service population analysis with potentially greater than 300 un-served users by 2012. These counties are also mapped on the following page with the orange color.

The second column, also from the Service Population Analysis identifies those counties with greater than 138 users but have no IHS or tribal health care facilities.

The third column from analysis of the User Population map identifies counties of greater than 138 users beyond the thirty mile primary care access standard.

The fourth column identifies communities, which fell out of the analysis of actual vs. predicted provider visits. (See appendix C). Communities identified are those communities

- which experienced more than 250 visits below the predicted and which were more than 50% below the predicted (larger populations) or (mapped with red dot)
- which were below the 50% predicted visit threshold (smaller communities, mapped with red dot) and
- exist in the underserved counties of column one (See the map on the following page.)

The fifth column contains communities, which were found to be of a population greater than 200, and which were geographically isolated, (greater than 70 miles) either by distance or geographical features, from current IHS health care assets.

The sixth column identifies communities mentioned by the Work Group from the questionnaire.

The seventh column lists our recommendations for new PSAs in that they were all listed at least three times within the 6 column analysis. It is our recommendation that new Primary Care Areas be established in Kalispell, Phillips County (Malta centered), and Casper (urban program), that a Great Falls/Little Shell PSA be created in conjunction with that Urban Program and that direct primary care assets be strengthened in the new urban PSA communities of Billings, Great Falls, Helena and Missoula.

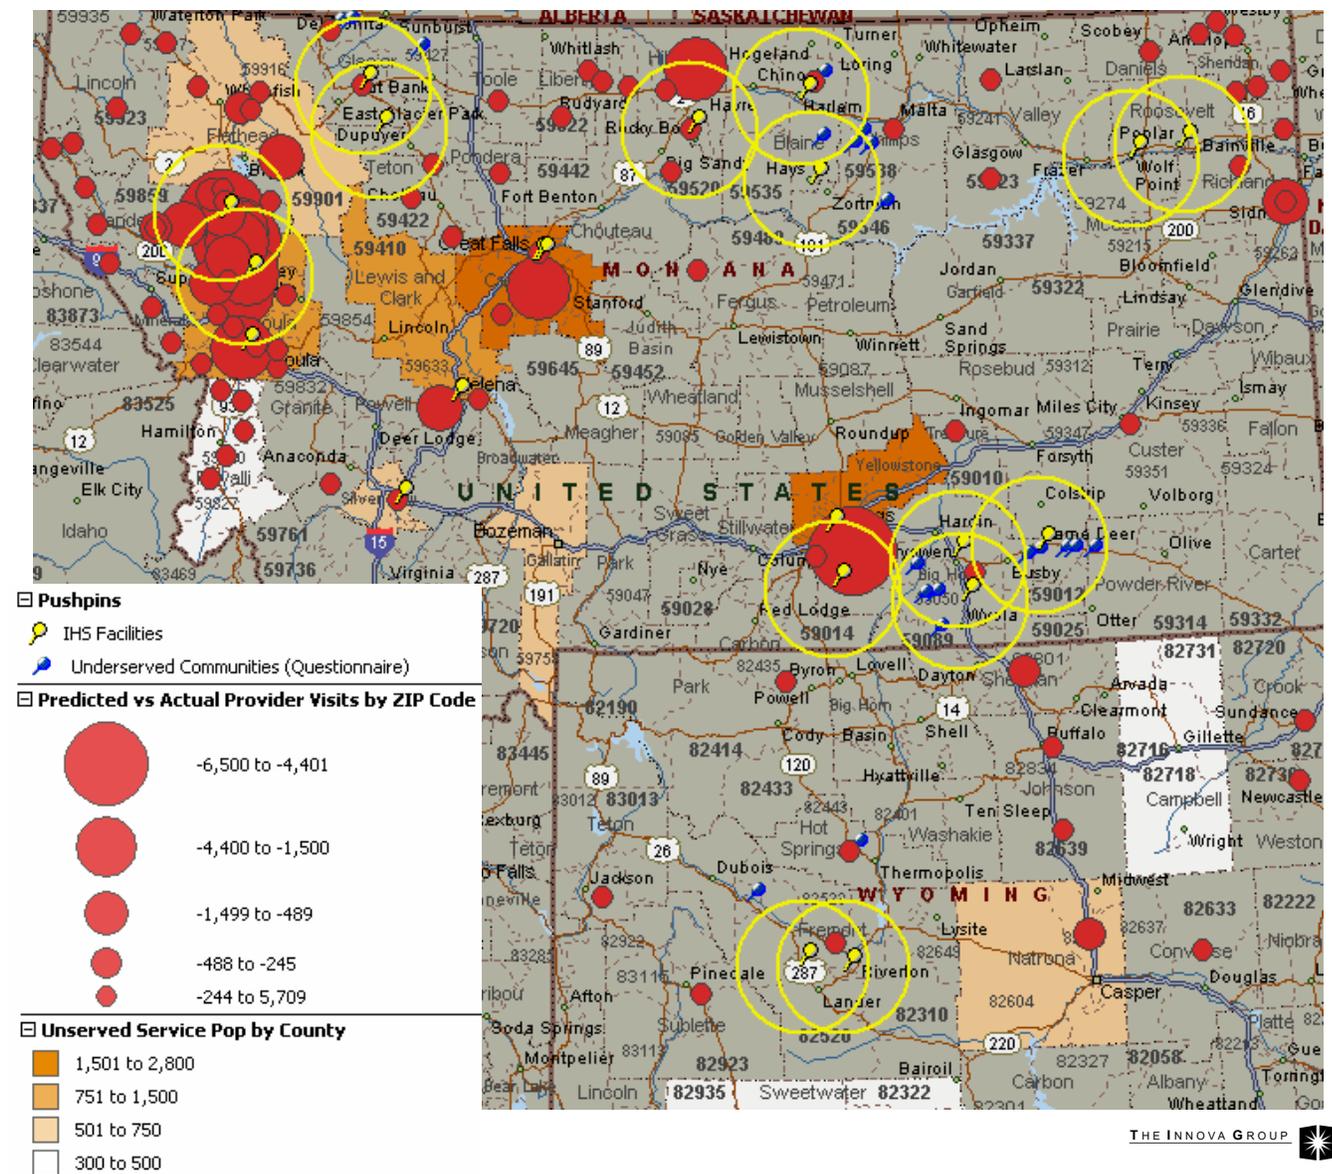

Please review the grouping of communities for each of the proposed 23 PSAs on the pages labeled Service Area Community Assumptions following the referenced map and chart.

Elimination Discussions

- Babb/St. Mary only met the geographical criteria.
- Valley County’s population base is close to Wolf Point.
- Sidney was eliminated due to its minimal 2001 User Population.

- Silver Bow County only meets one criteria and has a relatively small User Population. Strengthen the Urban Program in Butte will address this underserved area.
- Ashland appears to be effectively served by the Lame Deer Service Unit (only a difference of 29 visits from predicted, or -1%).
- Beaver Creek had a small population and was over predicted visits.
- Birney was also over predicted visits and has appropriate access to Lame Deer.
- Busby was well over predicted visits (19%), and served by Lame Deer.
- Crowheart was over predicted visits and is apparently well served by Ft. Washakie.
- Cut Bank/Seville, while a larger population, is close to Browning and easily accessible on good highway.
- Dodson's small population was a drawback for further consideration.
- Kirby had a very small population.
- Lodge Pole appears to be well served in the Hays Unit, over the predicted visits by 46%.
- Mudy Cluster has a small population and is well over the predicted visits by 200 visits.
- St. Xavier is just below the expected visits and is supported by the Crow Service Unit.
- Thermopolis has a small User Population.
- Wyola is 40 Interstate miles from the Crow Service Unit.
- Gallitin, Weber, Campbell, Ravalli and Sweetwater Counties only met one criteria
- Plentywood had a small User Population

Underserved Communities and Counties

Counties with Un-served Populations of >300	Counties with >138 User Pop with no IHS assets	County User Pop >138 & beyond 30 mile Primary Care access	Communities with % Provider Visits below Expected, with Service Pop >300	Isolated Communities with User Pop >200	Work Group Input - Mentioned in Questionnaire	Recommend For New PSAs

Regional Groupings

Recommended Regional Areas

Stated goals of this project are; to improve service delivery, integrate services – area wide, and bring unity – forge partnerships. These goals are intended to improve operational efficiency, better access to health care, and an improvement in the health status of our communities.

As we consider regionalization of care it is important to remember that health care is a population-based business, which means the larger the population we serve, the more services we can afford to offer. Unfortunately, pooling of populations is often contradictory to access desires of your population. The Service Access Template, as discussed earlier in this section, which provides guidance that all services should be available within 60 minutes basically eliminates the potential for regionalization beyond the present Service Units.

Billings Area weaknesses identified at the Kick-Off meeting pertaining to regionalization include: Poor Access to care and communication. Priority determinants from the meeting pertaining to regionalization included: access to specialty care, a lack of Substance Abuse, and a desire to have the greatest impact with the least cost resource. Regionalization will help, as a larger population attracts a wider segment of specialized providers. The pooling of resources regionally will help address the Substance Abuse shortages. Regionalization would lead to regional and inter-regional communication which would lead to adopting best practices in the development and operation of these programs. Communication, lack of unified automated systems, information access uniformity and fragmentation of services are symptomatic of disconnected, isolated operating units. Regional interaction will help alleviated these issues.

When searching for regional opportunities, it is important to consider:

- Access to both direct and contract care delivery options
- Proximity to Tertiary Care Centers in Montana and Wyoming
- Current and future populations within the regional boundaries
- The strength of existing IHS health care assets and strong tribal programs in the proposed regions.
- Natural and historical travel and access patterns

The migration analysis suggests that today there is very little migration between Service Units, other than some migration from Lame Deer to Crow and some Rocky Boy to Fort Belknap.

The Innova Group has outlined three Regional Scenarios on the next three pages. In each scenario we have identified the proposed region visually, the PSAs, their User Populations and the Alternative care Providers by Region.

The best advantage of the three region scenario is that the regions are designed to take care of the largest population each, and therefore take advantage of the economies of scale. The number of regions is small, so creating and managing three fledgling operating units is not a difficult task and the Area can be very flexible and adaptable to best practices as they surface and become known. Presently some migration to Browning does occur from Great Falls, while Missoula migration to Flathead is also common while not huge. Virtually no migration to Crow occurs from the Wind River Service Unit. A disadvantage is that the regions are all very large geographically, with diverse peoples who have not, historically, been interdependent. Integrating customs, practices and behaviors will be more difficult in this scenario.

The four region scenario creates a separate region for the urban programs. The benefits of the previous scenario are retained and an advantage is gained by creating a separate identity for the urban program which is somewhat different than the IHS service unit. Regional interfaces for the urban programs will

foster new cross community representation and perspective to the urban program operations. Crosspollination of the urban programs will bring the strength of each forward to the benefit of the whole. One program is strong in substance abuse, one is stronger in youth programs, and still another has the lead in primary care delivery. By integrating these programs in a region, the communication of best practices will be a strong advantage. This scenario will contain the same basic disadvantages as the three region scenario.

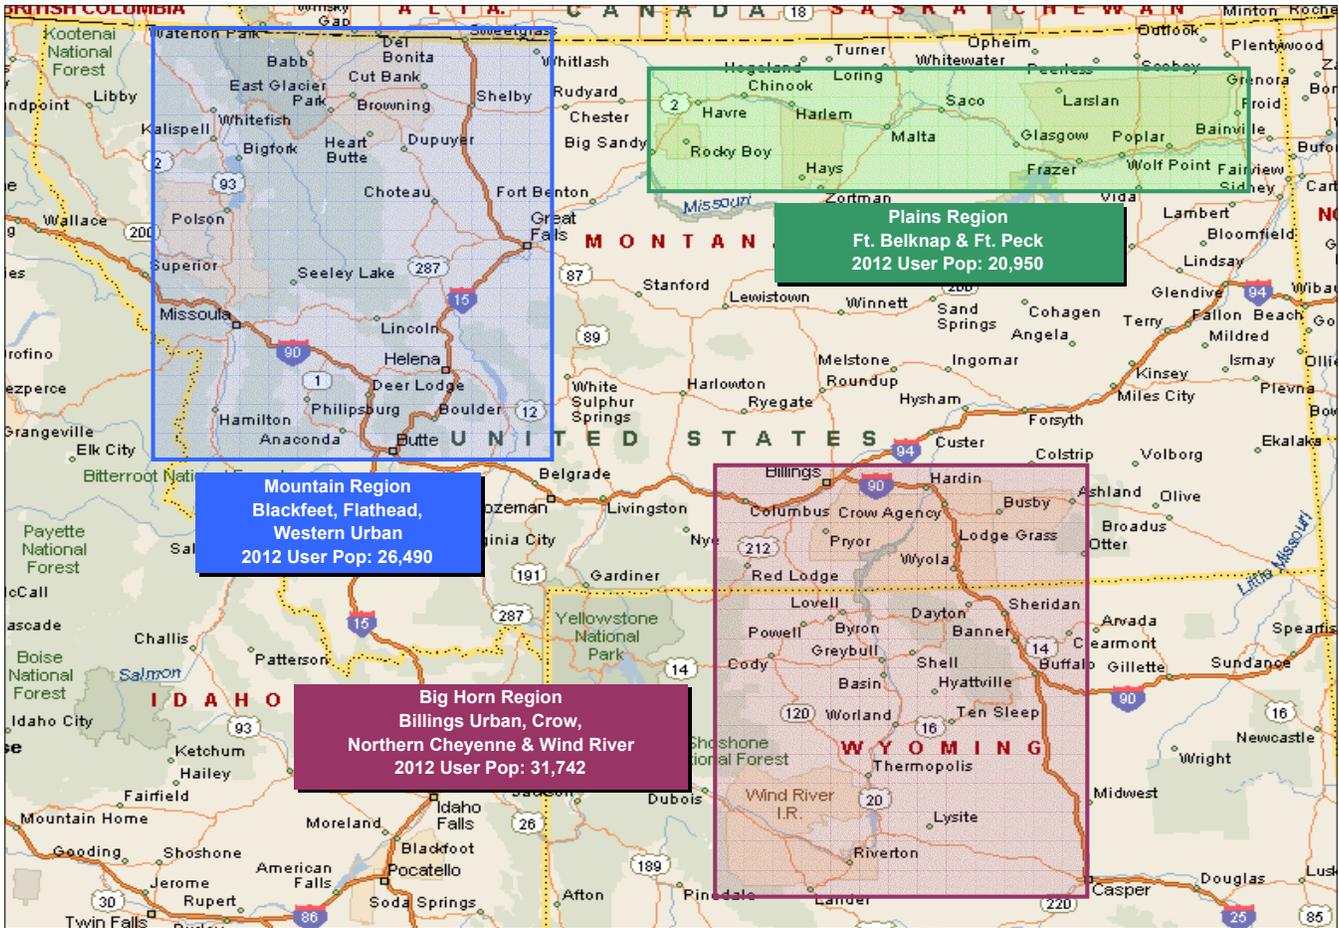

The recommended scenario is the five region scenario. In this scenario, we retain the four previous regions, and recognize Wyoming as it's own region. This will solve the greatest problem of geography presented by the other scenarios. The distance to Crow as the nearest IHS Hospital is a problem of previous scenarios. A disadvantage would be creation of too many regions, but we have not yet reached that threshold. The number is large enough that we can still share best practices, but not so large that we loose the agility needed to be successful. An advantage is that five regional leadership teams will bring forward more diverse thought and courage in trying new things, and the number stays small enough that duplication of best practices is still feasible and manageable. This scenario also comes closest to the Service Access Template designed earlier in this section.

The other strength of regional development is that each region may find a niche in certain programs, and benefit from not only intra-region, but also inter-region business growth and market share. It also becomes a platform for development of Area and Regional programs in Pre-hospital care and expanded substance abuse programs. Expanded specialty care, duplication of best practices, enhanced communication, better contracting possibilities are all strong reasons for consideration of regional development.

The Innova Group recommends that the five-region scenario be pursued in this project.

Migration Summary & Recommendations

The Analysis that follows is designed to allow a better understanding of Area-wide Migration, in order to understand natural directions of travel and care access outside home Service Areas. This analysis also has to determine a specific planned migration for each Primary Service Area's future. The question that needs to be answered is, what is the tendency for the User Population to seek care outside their Service Area of residence? Some Service Area's will have positive migration, and some will have negative migration. Over the entire area there should be a balance of zero migration. Exceptions to this rule are the medical center locations of IHS, such as Gallup, Phoenix and Anchorage, which in fact may draw Native American patients from outside their Area for Specialty Care. Our experience indicates that Service Areas that act as regional market centers places (places with larger quantities of shopping and business), that have appointment availability, that have newer or nicer facilities, and that perhaps have specialty care clinics tend to have positive or in-migrations. Negative or out-migration Service Areas are likely to have limited staff coverage, limited appointment availability, an older undersized facility and be located in a region that draws limited visitors/shoppers from outside the local SDA. Traditionally and realistically larger facilities benefit from migration and smaller facilities should anticipate some out-migration. In order to move forward with this study, we must make some assumptions for planning on how we believe we should plan for migration.

Negative Migration or Out-Migration – Service Areas that anticipate more visits from their user population to seek care elsewhere, than they expect Other-Service Area User Population's visits to seek care at their facility.

Positive Migration or In-Migration - Service Areas that anticipate less visits from their user population to seek care elsewhere, than they expect Other-Service Area User Population's visits to seek care at their facility.

The charts on the following page show a 3-year average historical migration for outpatient services. Specifics summarized in these reports are located within your Service Area section.

- There is very little migration into the Billings Area from other IHS Areas. No PSA showed greater than 1% of its visits being from outside the Billings Area

Primary Care – There are seven Service Areas indicating positive migration within the Billings Area. The majority of this migration is from within their own Service Units. Crow is experiencing some in-migration from Lame Deer and Ft Belknap is experiencing some from Rocky Boy. Improving Direct Care Assets within the Flathead Service Unit from Missoula to Kalispell will substantially change the migration in this region, thus zero migration must be the planning recommendation. Improvements to the staffing and/or facility at Lodge Grass will likely reduce the flow to Crow for Primary Care. Improving Primary Care in Billings will reduce the migration to Pryor and Crow from the city. Crow should continue to plan for the positive migration of 14% from Lame Deer. Hays, while having a new facility, still shows a substantial out migration to Fort Belknap, this will likely continue into the future. Arapahoe, Browning, and Poplar should be planned for their positive historical migration into the future. Hays resources will be planned with a negative 20% to Fort Belknap.

ER/Urgent Care – The three hospitals, Crow, Browning and Fort Belknap all show moderate positive migration to their Emergency departments. Lame Deer is showing a negative migration from its Emergency room with some workload being lost to the Crow hospital. This out-migration has declined in each of the years analyzed, but a portion of the Northern Cheyenne Service Unit will continue to be closer to the Hospital at Crow. A negative migration of 5% is recommended for future planning for the Lame Deer Service Area.

Specialty Care – The three hospitals show moderate positive migration for specialty care, primarily coming from their Service Units. Poplar is the location for Specialty care in the Fort Peck Service Unit. The planned migration for specialty care has more to do with the availability of specialist, local staffing capability and capacity. This complex relationship does not allow a simple percentage migration to be applied to these workloads. As we move to the next phase and consider workload referrals to regional centers, the

migration patterns for Specialty Care will be established. All areas will be planned for zero migration for Specialty Care.

Inpatient Care > 14 years of age, Inpatient Care < 14 years of age – This has not been completed at this time. A new complete data set has been requested.

Outpatient Summary
